❖ **Assignment 8**
❖ **Web Services**

- ❖ **Aim:** To create a simple web service and write a distributed application to consume the web service.

❖ **Source Code**

- ❖ **File: SimpleWebService.java**

```
import com.sun.net.httpserver.*;
import java.io.*;
import java.net.*;

public class SimpleWebService {

    public static void main(String[] args) throws Exception {

        HttpServer server = HttpServer.create(new InetSocketAddress(8000), 0);

        server.createContext("/add", (exchange) -> {

            String query = exchange.getRequestURI().getQuery();
            String[] params = query.split("&");

            int a = Integer.parseInt(params[0].split("=")[1]);
            int b = Integer.parseInt(params[1].split("=")[1]);

            int result = a + b;

            String response = "Result = " + result;

            exchange.sendResponseHeaders(200, response.length());

            OutputStream os = exchange.getResponseBody();
```

```
        os.write(response.getBytes());
        os.close();
    });

    server.start();
    System.out.println("Server running at http://localhost:8000");
}
}
```

❖ Source Output

```
PS D:\BE IT Sem II\LP V\Assi8> javac SimpleWebService.java
PS D:\BE IT Sem II\LP V\Assi8> java SimpleWebService
Server running at http://localhost:8000
```

In Browser

<http://localhost:8000/add?a=10&b=5>
Result = 15
